

# My OPSWAT™

## Seamless Central Management for Cybersecurity Control

My OPSWAT is an all-in-one platform for managing and monitoring OPSWAT products. Remotely manage instances, perform global operations, and handle updates and licensing from a single pane of glass. Available in the cloud and on-premises, My OPSWAT simplifies central management while enhancing visibility and control.

## Business and Technical Challenges

To implement a multilayered, defense-in-depth cybersecurity strategy, organizations must deploy multiple products across different platforms to protect their infrastructure, while still maintaining efficient operations and uninterrupted services to meet diverse customer needs. Operating through each product's management console leads to fragmented monitoring and increased complexity in security risk management.

- 1 Complex Security Management**  
 Managing security across multiple locations, devices, and solutions can become overly complex, leading to inconsistency, inefficiencies and increased risk of human error.
- 2 Inefficient Monitoring**  
 Security teams struggle to collect, aggregate and analyze data from multiple consoles, increasing the risk of blind spots in threat detection, especially in large and complex environments.
- 3 High Cost Management**  
 Managing disparate security solutions consumes valuable time and resources. Also, addressing security incidents across multiple platforms can lead to inflated operational costs and impact overall profitability.

## Key Features

### Single Pane of Glass

Manage all MetaDefender product instances easily from a single console. Update security policies, manage anti-malware updates, and monitor instance health in near real-time. My OPSWAT also offers a global view of data processing and communication between MetaDefender products.

### Global Risk Data Visibility and Management

My OPSWAT aggregates events and reports to enhance threat visibility, allowing organizations to monitor real-time potential security risks and analyze threat trends over time to migrate security risks quickly.

### Streamlined Management and Update Process

My OPSWAT simplifies managing and updating all MetaDefender products in one place, so organizations can spend less time on security maintenance and more time on critical business priorities.

### Increase Efficiency and Reduce Costs

Manage hundreds of deployments from one place, simplifying configuration, updates, status checks, health reporting, and license management.

### Simple and Flexible Deployment

Cloud-friendly options are available for global management along with on-premises and air-gapped solutions for secure or compliance-restricted environments.

## Integration and Deployment

My OPSWAT can be deployed on-premises, within your cloud infrastructure or in an air-gapped network.

- **On-Prem:** My OPSWAT virtual appliance is ideal for on-premises deployments with strict constraints.
- **IaaS:** For AWS deployments, consider My OPSWAT AMI for seamless scalability that is easy to implement.
- **SaaS:** For cloud deployments, our SaaS model ensures your organization has access to the latest updates and solutions, seamlessly integrated with your cloud infrastructure.

My OPSWAT provides RESTful APIs that allow seamless data retrieval from My OPSWAT to your data center, enabling data visualization across various systems within your organization.

## Explore My OPSWAT
